

Part 1

Basic Static Analysis

How to retrieve information without executing the malware and form a quick hypothesis about what it is doing

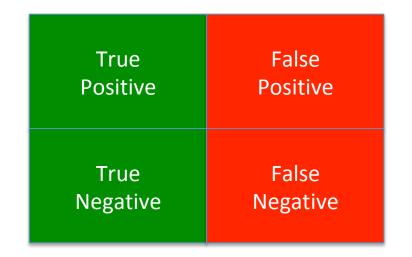

PE header, imported libraries, functions, strings, etc.

IoC are important for hypothesis building

IoC – Indicator of compromise

Will be used for any artifact that indicate that we may be facing malicious code

- Malware analysis can provide valuable IoC
- Often used to build IDS signatures
- Good IoC's can be helpful
- Bad IoC's can be a waste of time
- Maximizing true positive (what we want) Minimizing false positives (waste of time)

Basic Static Analysis

How and where can we "quickly" find IoC's ?

- Anti-Virus, Virus Total
- Hash and fuzzy hash
- Packed and obfuscated
- Portable Executable (PE) File Format
- Strings
- Linked libraries and functions (Imports and exports)

Challenge 1

- Use information available through basic static analysis techniques
- Describe potential indicators of compromise (loC's) and use them to form a hypothesis about the potential purpose/functionality of the sample

Suggested Approach

 Choose to use PeStudio – look for loCs NB! Results are version dependent (8.42 vs 8.54)

Indicators from PeStudio

- Hash
- Indicators (13/21 indicates malicious)
- File header TimeDateStamp
- Sections: .bbs? Raw size vs virtual size?
- Imported Libraries
 What functionality do these libraries and functions potensially give?
 - Network (WSAStartup, connect, bind, ...)
 - GetTickCount (anti-debug?)
 - Mutex (CreateMutex)
 - Prosess (Create/terminate Prosess/thread, ShellExecute)
 - Keys (GetAsynkKeyState, GetKeyState)
 - Registry (open, create, ...)
 - File (open create, ...)
- Strings (wuamqr.exe, krnel, keylog.txt)
- Version: original filename wuaumgr.exe

Hypothesis

- Keylogger with network capabilities. Can manipulated both files and registries. Can start new processes and threads. May have anti debug capabilities and use mutex. Look for keylog.exe, wuaumqr.exe
- Pluss loads more... with strings from V8.54

Summary

- Basic static analysis
 - Simple first step
 - Get a first impression and collect some IOC
 - Get help decide where to start deeper analysis
- Next
 - Basic dynamic analysis
 - Need a safe environment to execute malware
 - NB! Always use safe environment.
